SOUTHERN REGION

STAFF SPECIALIST RADIOLOGIST

Royal Hobart Hospital Hobart, Tasmania, Australia

Following installation of a 1.5T MRI at the Royal Hobart Hospital, a full-time Specialist position has become available in the Department of Radiology.

We are seeking a General Radiologist with a broad experience in CT, Ultrasound, Mammography and Angiography.

Skills in Interventional Radiology and/or MRI would be an asset.

The successful applicant will participate in a 1 in 6 roster and share in a teaching program for Radiology Registrars.

The Radiology Department is well equipped with MRI, CT, Ultrasound colour doppler, Mammography and D.S.A. The departmental library contains most modern radiological texts, 21 current journals, and the A.C.R. film collection.

The Royal Hobart Hospital is the principal teaching hospital for the University of Tasmania Medical School and has approximately 550 beds. All major services are provided on site.

DUTIES: The appointee will be expected to participate fully in the service, teaching and quality assurance activities of the hospital. Research is encouraged.

QUALIFICATIONS: Applicants should be registerable in Tasmania and possess the F.R.A.C.R. or equivalent.

CONDITIONS: Salary according to experience with generous annual, sick, conference, sabbatical and long service leave entitlements. The appointment will include rights of private practice with a limitation on earnings from exercising these rights within the hospital, to 35% of the base salary. Assistance with relocation expenses may be available and temporary housing may be provided, subject to availability.

ENQUIRIES should be addressed to the Director of Radiology, Dr P.F. Davies, (002) 388625 or GPO Box 1061L, Hobart 7001 Tasmania Australia.

APPLICATIONS, which should include full details of qualifications, training and experience and names of 3 referees, should be directed to Dr P. McCann, Hospital Manager, GPO Box 1061L, Hobart, 7001 Tasmania, Australia by 12th December, 1992.

The professional difference

The Clinac[®] 600C

Take the concept:

Its simplicity is still unmatched. Its beam stability gains new relevance when treating exceptionally small fields used in stereotactic radiosurgery.

Take the isocenter:

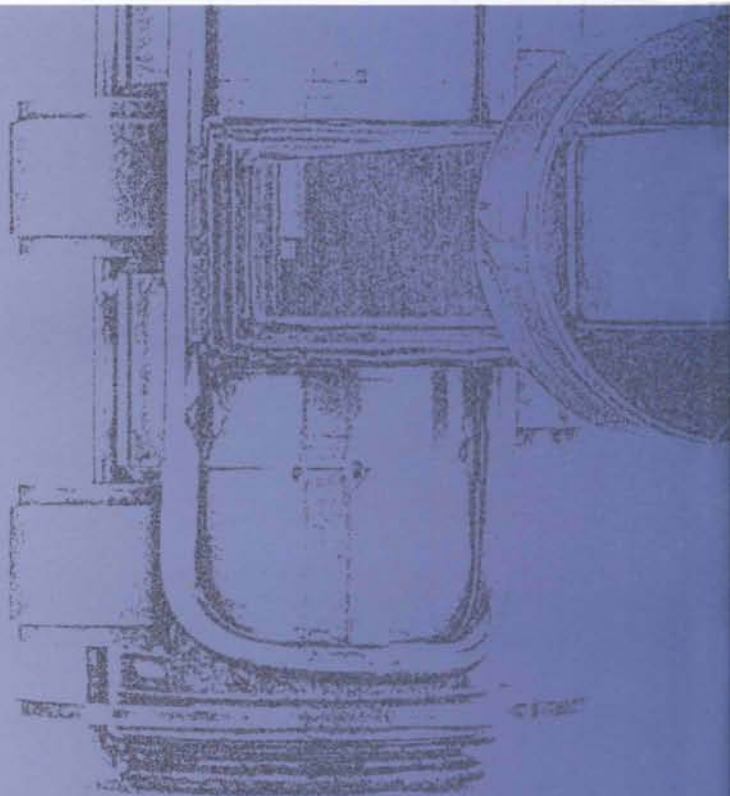

It's a careful balance between working height and positioning space.

Take the cost:

Low running costs, no source replacements, higher throughput make it the ideal workhorse.
